

Jihad Abdighani | Full-Stack Web Developer

Beirut, Lebanon | +961 81873966 | jihadabdlghani@gmail.com

[LinkedIn](#) | [Github](#)

PROFILE

A full-stack web developer that possesses a strong foundation in web development. I have strong problem-solving and creative thinking skills and enjoy keeping up-to-date with the latest trends and technologies.

WORK EXPERIENCE

- **MERN-Stack Developer Internship | Codi Tech | August 2023 - Present**

- Back end (NodeJs ExpressJs, SQL, MongoDB)
- Front end (JavaScript, React, Bootstrap, tailwind)
- Server Management (Linux)
- Project Management (AGILE Methodology)

- **Spring Boot Developer | Dg-pad | July 2023 - September 2023**

- Back end (Microservices, Spring boot)

EDUCATION

Bachelor Technology - BTech, Computer Science | Al-Maarif University | 2020 - 2023

Relevant Courses: Web Development, Software Engineering, OOP, Database Systems.

PROJECTS

[Tracket](#) | **Node.js, Express.js, HTML, TailwindCSS**

An application that comprises a web application and an Arduino-based car that exchanges data.

- The web application sends route details including the launching time and other stuff to the vehicle. In return, sends back the data collected during the mission, mainly sensor data consisting of temperature, and humidity.

AP-picture | HTML, CSS, TailwindCSS, Javascript

A graphic design company portfolio website showcasing the company's work and projects.

- The portfolio is still in Progress.

Tous Pour Le Leban | MERN-Stack

An association website portfolio plus a blog shows the association's purposes, news, and events.

- The project was built by a team of three, and we used agile methodology to manage the workflow.

Budgetly | MERN-Stack

A company financial tracker web application.

- The project keeps track of a company's financial status, three users can use it each of them with different functionalities, and the statics are visualized in graphs using the D3.js package

and Socket.io to keep it live. The project was made by a team of three, following Agile methodology to manage the workflow.

Dream Estate | *MERN-Stack*

A real estate rental web application.

- Users can see and enter estates for rent by requesting a book with the owner, and the user can filter estates by type and search for specific names.
